

# REDACTION WITHOUT THE HASSLE

The new Redaction Studio makes video redaction faster and easier.

We get it. There's an inherent problem with the current video redaction process. Agencies have to send off redactions for processing with their fingers crossed the evidence returns thoroughly redacted. In many cases, the evidence need reprocessing, repeating this inefficient cycle. Plus, object tracking isn't always reliable and can drop off without you noticing. Errors tend to surface only after you've received the completed redaction, costing you more time and energy to re-redact. Redaction should be the easy part. Now it is.

## FEATURES & BENEFITS

YOU ASKED. WE DELIVERED.

**NO EXTRA SOFTWARE NEEDED:** Built within Evidence.com, Redaction Studio makes it easy to manage, share, and redact evidence all in a dedicated, separate window. No extra software purchase required.

**REAL-TIME OBJECT TRACKING:** Current tracking algorithms can drop objects, resulting in more time spent manually editing evidence. With Redaction Studio's enhanced object-tracking feature, you can add masks in video and immediately playback your edits to adjust the tracker where necessary—improving overall accuracy.

**SPRAY PAINT REDACTION:** Frame-by-frame redaction is no longer a headache. With the new spray paint feature, you'll be able to add masks and follow objects that need redacting with your cursor—all at a half-speed playback.

## WHAT'S TO COME?

SEE HOW WE'RE LEADING THE CHARGE.

**MDT AND SCREEN DETECTION:** When asked, agencies overwhelmingly agreed that Mobile Device Terminal (MDT) and screen redaction is their biggest pain point. That's why we're planning to introduce our MDT and screen detection technology to minimize time spent redacting.

**INVESTING IN THE FUTURE:** We're adding new features that harness the power of AI and other cutting-edge technologies all in an effort to save you time. As we develop these updates, we'll automatically push them to your device. Stay tuned!
